# Cornwall IFCA general information sheet

Fish and shellfish minimum sizes

[www.cornwall-ifca.gov.uk](http://www.cornwall-ifca.gov.uk)

## Fish minimum sizes

The following apply to both recreational and commercial sectors.

Bass	42cm
Black Seabream <sup>+</sup>	23cm
Brill <sup>+</sup>	30cm
Conger Eel <sup>+</sup>	58cm
Dab <sup>+</sup>	15cm
Flounder <sup>+</sup>	25cm
Grey Mullet <sup>+</sup>	20cm
Hake <sup>+</sup>	30cm
Lemon Sole <sup>+</sup>	25cm
Megrim <sup>+</sup>	25cm
Red Mullet <sup>+</sup>	15cm
Turbot <sup>+</sup>	30cm
Witch Flounder <sup>+</sup>	28cm
The following size applies only to recreational fishing.	
Red Seabream <sup>+</sup>	25cm

<sup>+</sup> This minimum size is prescribed by a legacy bylaw inherited by Cornwall IFCA. There are some small areas within the Cornwall IFCA district where this bylaw does not apply. Please contact us for more information.

Minimum sizes that apply to only the commercial fishing sector. The Landing Obligation may require vessels to retain fish smaller than are listed.

Anchovy	12cm
Blue Ling	70cm
Cod	35cm
Haddock	30cm
Herring	20cm
Horse Mackerel	15cm
Ling	63cm
Mackerel	20cm
Plaice	27cm
Pollack	30cm
Red Seabream	33cm
Saithe	35cm
Sardine	11cm
Sole	24cm
Whiting	27cm

## Crustacea

Crawfish <sup>+</sup>	110mm
Edible Crab female <sup>+</sup>	150mm
Edible Crab male <sup>+</sup>	160mm
Spider Crab <sup>+</sup>	130mm
Lobster <sup>+</sup>	90mm

The following sizes apply to commercial fishing only.

Velvet Crab:	65mm
Deepwater Rose Shrimp:	22mm (carapace)
Norway Lobster:	85mm overall length, or 25mm carapace or tails 46mm

Applies to both commercial and recreational fishing

## Shellfish

Bivalve molluscs and whelks shall be measured across the longest part of the shell. The following sizes apply to commercial fishing only.

Bean Solen	65mm
Carpet Shell	38mm
Clam	40mm
Donax Clam	25mm
Hard Clam	60mm
Grooved Carpetshell	40mm
Queen Scallop	40mm
Razor Clam	100mm
Scallop	100mm
Short Necked Clam	35mm
Surf Clam	25mm
Whelk	45mm
Octopus	750g

**Mussel (Fal Fishery)** – A person must not remove from the Fal Fishery Area any mussel less than 50mm in length.

**Native Oyster (Fal Fishery)** – A person must not remove from the Fal Fishery Area any native oyster which will pass through a circular aperture of 67mm diameter when the shell is laid flat across the aperture. [Please note a Fal Fishery licence is required to remove the above two species. See reverse for more details.]

**Cockles in estuaries** – No person shall remove from Cornish estuaries any cockle that will pass through a space of 20mm width. This applies to both commercial and recreational fishing.

**Winkle** – A Cornwall IFCA code of practice requests that winkles should only be retained if they fail to pass through a riddle constructed of rigid mesh or bars spaced at least 16mm apart.

The commercial harvesting of bivalve molluscs for human consumption is subject to them being taken from a designated area where water quality is monitored and classified as suitable by the Foods Standards Agency. For local information on harvesting areas and shellfish depuration please contact the Port Health Authority on 01872 323090.

The Cornwall IFCA District extends from Marsland Mouth on the north coast of Cornwall, around to the western end of the Plymouth Breakwater in Plymouth Sound on the south coast. This includes the rivers and estuaries up to tidal limits, and all waters out to six nautical miles. The District is extended by many exposed rocks including the Eddystone rocks.

**Edible Crab**  
*Cancer pagarus*  
 Minimum size  
 Male: 160mm  
 Female: 150mm

**Scallop**  
*Pecten maximus*  
 Minimum  
 size 100mm

**Spider Crab**  
*Maja spp.*

Minimum size,  
 both male and  
 female: 130mm

**Crawfish**  
*Palinurus Elephas*  
 Minimum size 110mm (carapace).  
 Crawfish which are 'berried' (carrying eggs)  
 are protected and must be returned to the  
 sea.  
 Crawfish with a 'V' notch or a mutilated tail  
 flap must be returned to the sea.

All fish species to be  
 measured from the tip of  
 the snout to the end of the  
 tail fin.

**Lobster**  
*Homarus gammarus*  
 Minimum size 90mm  
 (carapace)  
 Lobsters which are 'berried'  
 (carrying eggs) are protected  
 and must be returned to the  
 sea.  
 Lobsters with a 'V' notch or a  
 mutilated tail flap must be  
 returned to the sea.

**Crawfish** – measured as the length of the carapace from the tip of the rostrum to the midpoint of the distal edge of the carapace

**Edible Crab** – measured as the maximum width of the carapace measured perpendicular to the midline

**Lobster** – measured as the length of the carapace, parallel to the mid line, from the back of either eye socket to the distal edge of the carapace

**Spider Crab** – measured as the length of the carapace, along the midline, from the edge of the carapace between the rostrums to the posterior edge of the carapace

**Velvet Crab** – measured as the width of the carapace across the broadest part of the back (excluding spines)

**Cornwall IFCA River and Estuarine Fishing Nets Byelaw:** It is an offence to use a net for sea fish in any of the rivers or estuaries within the Cornwall IFCA district, this does not apply to various low impact nets such as; landing nets, sand eel seine nets used under a permit issued by Cornwall IFCA and ebb nets used under a permit issued by Cornwall IFCA. Please visit the website or contact the office for more information.

**Shellfish permit:** An annually renewable permit is required for any person fishing from a vessel and removing more than five animals from the species of lobster, crawfish, edible or spider crab (with no more than two from the species of lobster and crawfish) per day. Shellfish permits are only issued for licenced and registered fishing boats.

**Fal Fishery:** The native oyster and mussel fisheries in the Fal are under the management of Cornwall IFCA. If you wish to dredge for, or hand-gather oysters or mussels from within the area covered by the Fal Fishery Order you will need to apply to Cornwall IFCA for a Fal Fishery licence.

**www.cornwall-ifca.gov.uk Tel: 01736 336842**

 Information correct as of 1 June 2020, please check website or contact our office for the latest information.

## CORNWALL COUNCIL MARITIME SECTION

*Cornwall Council is responsible for a number of local authority owned ports and harbours – Bude, Newquay, Portreath, St Ives, Penzance, Truro, Penryn, Prince of Wales Pier (Falmouth), Portscatho and Portwrinkle together with some maritime assets at Downderry and Saltash.*

Most of these are statutory harbour undertakings, set up by individual harbour orders which enable construction of part or parts of the harbour and which also bring in some primary harbour legislation. These harbours are of a varying size and operation, with some offering commercial facilities and others more related to the fishing industry or leisure market.

What is of importance is the requirement of all of these harbours to be compliant with the Port Marine Safety Code. Harbours and ports in the UK fall under one of three categories of governance – private, trust or municipal.

Each of the three types is open to market forces and they should be independently run as stand-alone enterprises, free from government support or subsidy. The Municipal Port Review (May 2006) states “like trust ports, municipal ports are operated for the benefit of stakeholders including the local community but, unlike trusts, they are not in general governed by an independent, bespoke, expert and directly accountable body”. The report goes on to recommend that local authorities should consider adopting the tried and tested benefits of the trust ports governance model, which are readily transferable to the municipal ports.

As a result of this review Cornwall Council has a Harbours Board consisting of six councillors and six independent members. The Harbours Board is responsible for the functions arising out of any byelaws made by the Council under the Harbour Orders including the determination of any fees and charges. (In relation to the determination of fees and charges such are to be recommended to Council).

The discharge of these functions within any policy and budget approved by Council is delegated as set out in the Memorandum of Understanding between the Harbours Board and the Council.

Those functions that fall within the duties of a Harbour Authority would include dredging, hydrographic surveying, provision of buoyage, beacons and navigational lighting, wreck removal, byelaw enforcement, maintain harbour patrols for the protection and regulation of navigation, notices to mariners etc

The Harbours Board will manage the harbours within the limits of the respective orders and legislation relating to harbours which would include (by way of example) management and regulation of moorings, beach berths (including numbers, locations, specifications, waiting lists etc.) and zoned areas so as to enforce the protection and regulation of navigation.

## HISTORY OF BUDE HARBOUR

### **Bude Harbour and Canal**

In the 18<sup>th</sup> century Bude had a small unprotected tidal harbour. The Bude Canal Company built a canal and improved the harbour.

Around thirty small boats use the tidal moorings in the harbour during the summer months. Most are spot fishermen, but there is also some small-scale, semi-commercial fishing for crab and lobster.

There is a wharf on the Bude Canal about half a mile from the sea lock that links the canal to the tidal haven. North Cornwall District /council administered the canal, harbour and lock gates until its abolition in March 2009. Bude Harbour is now managed by Cornwall Councils' Maritime Department.

The canal is one of the few of note in south-west England. Its original purpose was to take small tub boats of mineral rich sand from the beaches at Bude and carry them inland for agricultural use on fields. A series of inclined planes carried the boats over 400 vertical feet (120 m) to Red Post, where the canal branched south along the upper Tamar Valley towards Launceston, east to Holsworthy and north to the Tamar Lakes that fed the canal. The enterprise was always in financial difficulty, but it carried considerable volumes of sand and also coal from South Wales. The arrival of the railway at Holsworthy and the production of cheap manufactured fertiliser undermined the canals' commercial purpose, and it was closed down and sold to the district municipal water company. However the wharf area and harbour enjoyed longer success and coastal sailing ships carried grain across to Wales and coal back to Cornwall.

The canal was regenerated in 2009 by North Cornwall District Council which brought it back into a good state of repair and it is now used by people for leisure activities such as fishing, canoeing, walking and running etc.

### **Bude Sea Lock**

The sea lock, which allows vessels to enter the sea from the canal and vice versa, is one of only two working manually operated sea locks in the UK. Built in 1823 and reconstructed in 1835 it is an iconic feature in the town.

### **The Breakwater**

The first Breakwater was constructed in 1819 to protect the Bude Canal but was destroyed by a storm in 1838. The present structure dates from 1839-43, and was built by George Casebourne, engineer to the Bude Harbour and Canal Company. The low wall with its sloping seaward side stands only 4 ft above the high water mark of Spring tides.

### **Chapel Rock**

Bude is said to have originated at Chapel Rock, where a chapel was built in the Middle Ages. This hermitage, dedicated to the Holy Trinity and St Michael in 1400, housed a light that was used to guide vessels safely into the harbour.

Budes' name, originally recorded as 'Bede's Haven' is thought by some to have derived from 'bede', an old Saxon word for 'prayer'.

### **Tommys' Pit**

On the seaward side of Chapel Rock is Tommys' Pit, Budes' first bathing pool. Originally for gentlemen only, on the payment to the attendant of 2d, the ladies were confined a safe distance away at 'Maer Ladies Bathing Beach', present day Crooklets Beach.

### **Barrel Rock**

Barrel Rock stretches out to sea and is so called after its beacon, a barrel supported on a metal pole. This is used to guide shipping around this dangerous rock.

## **DIRECTIONS FOR ENTRY TO HARBOUR BUDE CORNWALL**

The approach to Bude, either from the north or south, should be made from a south westerly direction in line with the first pair of leading marks.

### **THE OUTER PAIR OF BEACONS, BEARING 075 30 (T) CONSISTS OF:**

**Front mark – white spar with yellow diamond top mark.**

**Rear mark – white flag staff, both on cliff top on north side of harbour.**

Immediately on passing Barrel Rock (half cable north of Chapel Rock and marked by a beacon barrel) turn to starboard and pick up the inner pair of leading marks from which the sea lock is clearly visible.

### **THE INNER PAIR OF BEACONS, BEARING 131 30 (T) CONSISTS OF:**

**Front mark – white spar with yellow triangle top mark.**

**Rear mark – white spar with yellow triangle top mark, placed half cable west of sea lock entrance.**

Entry to the harbour is made by leaving Chapel Rock (linked to the mainland by a Breakwater) to Starboard. Head towards the Lock in the Channel marked by two pairs of leading beacons.

**Entry to the Harbour at night is NOT recommended.**

**Heavy ground swells and breaking seas may prohibit entry and exit.**

The Harbour dries out at each tide and entry to vessels is normally restricted to two hours either side of high water.

For locking, a minimum depth of 2.4m over the lock sill is required. A heavy ground swell may also prohibit the operation of the lock.

Prior notification of arrival should be made to the Harbour Master who will require 48hrs notice for locking.

## BUDE HARBOUR

### Slipway Users – Advisory Information

Bude Harbour consists of two parts, the Haven where moorings are located and the lower wharf on the canal beyond the Sea Lock gates. The haven is defined on the northern side by the River Neet which forms a channel out to the sea and is protected from south westerly swells by the breakwater which runs across the front of the haven. Due to its westerly facing direction the harbour is open to large groundswells and storms, this can make it difficult to exit and enter so care should be taken.

### Exiting the Harbour

If the sea is flat calm boats can leave the harbour as soon as they are floating. If there is a small ground sea running boats can leave the harbour approximately one and a half hours before high tide. When leaving the harbour boats should keep to the natural channel created by the river avoiding mooring chains and buoys. Boats should head straight out to sea keeping as close to barrel rock as possible, do not attempt to cut across Summerleaze beach and be aware of other water users and anglers fishing off the breakwater. Please note that waves breaking around the barrel can seem smaller from the shore than they actually are.

Do not attempt to leave the harbour if there is a large ground sea running and large waves are breaking around the barrel. If you are unsure call the Harbour Master 07816077755. If no other boats have left the harbour then this is a good indication that it is too dangerous.

### Entering the Harbour

The harbour can be entered up to one and a half hours after high tide. When entering the harbour please use the navigation aids. Care must be taken if entering when groundswell is running. **DO NOT ENTER FROM A NORTHERLY DIRECTION** i.e. across Summerleaze beach as you will leave the boat open to the possibility of being hit broadside by a wave. Always enter from a southerly direction i.e. preferably from the back of the breakwater. Again be aware of other water users and fishermen.

**VHF Radio** - The use of VHF radio is strongly advised.

**VHF Radio** - The use of VHF radio is strongly advised.

## MOORING & ANCHORING CHAIN

The best choice for anchoring and mooring chain is short link chain. This is, excluding stud chain, the heaviest and strongest of chains as well as being the most flexible. By definition, short link chain has a link of outside dimensions not exceeding 5 times the material diameter in length and 3.5 times in width necessitating the fitting of large end links by the manufacturer. It should be noted that these are maximum dimensions only and if chain is needed to fit a windlass gypsy wheel it is unlikely that the short link will be suitable. Calibrated chain is designed to be used with a windlass, a manufacturing process involving making the chain deliberately short and then stretching it to its final dimensions.

### ADDITIONAL COMPONENTS

There is a wide range of other components which could be used in a mooring system and it is important to ensure that those used are of equivalent strength to the chain. Using components which will fit a chain, with no regard to relative strengths is all too common. As an example, given similar materials, a conventional shackle which will fit directly into short link chain can at best be only about half the strength of the chain. Compatibility of materials is vital too - the problems of dissimilar materials and electrolysis are only too well known.

### SHACKLES

By far the most popular shackle types are the dees and bows. Dee shackles are usual where two components are to be connected, whereas bow shackles are most suitable as three way connectors. Needless to say, all shackle pins should be 'moused' using galvanised seizing wire.

### SWIVELS

There are various designs available and the user should ensure that the swivel chosen will accept the correct size shackle or shackle pin. Like shackles, there are two popular types: the chain swivel for joining two components and mooring swivels for joining three. Mooring swivels are designed to take a shackle pin at one end and shackle eyes at the other.

### MAINTENANCE

Although maintenance should be based on regular inspection, the precise procedure to be followed for any mooring depends on local conditions. If a mooring is exposed to strong tidal conditions and rough weather it will naturally wear more quickly. Normal wear and tear is not, however, the only cause of damage to mooring components. Corrosion, erosion and electrolysis can all be responsible for rapid and dramatic removal of metal. Consequently moorings on new sites need to be monitored carefully until a wear pattern can be established.

If possible moorings should be lifted for winter storage, or alternatively the riser may be sunk and marked with a buoy. Either of these procedures can double a mooring's effective life. Another useful tip is to position the swivel, which wears rapidly, at the top of riser, where it can be inspected in situ. Finally, no time should be lost in making an inspection of a mooring where movement has been detected or suspected.

The degree of wear that can be safely permitted before replacement again varies with individual circumstances. A ground chain will often be far larger than strength requirements dictated, as it is bought primarily for its weight. Risers, however, have to be supported by a buoy and so tend to be nearer to the minimum acceptable size. As a guide one should not allow more than 15% reduction below the chain diameter. Remember that the ends of a link wear more rapidly. Badly rusted chain should never be used, particularly if the surface has been removed to expose the grain of the metal.

## METEOROLOGY BEAUFORT WIND SCALE

Beaufort Scale Number	Description and limit of wind speed in knots	Sea Criterion
0	Calm Less than 1	Sea like a mirror.
1	Light air 1 - 3	Ripples with the appearance of scales are formed but without foam crests.
2	Light breeze 4 - 6	Small wavelets, still short but more pronounced, crests have a glassy appearance and do not break.
3	Gentle breeze 7 - 10	Large wavelets. Crests begin to break. Foam of glassy appearance. Perhaps scattered white horses.
4	Moderate breeze 11 - 16	Small waves, becoming longer; fairly frequent white horses.
5	Fresh breeze 17 - 21	Moderate waves, taking a more pronounced long form; many white horses are formed. (Chance of some spray).
6	Strong breeze 22- 27	Large waves begin to form; the white foam crests are more extensive everywhere (Probably some spray).
7	Near gale 28 - 33	Sea heaps up and white foam from breaking waves begins to be blown in streaks along the direction of the wind (Spindrift begins to be seen).
8	Gale 34- 40	Moderately high waves of greater length; edges of the crest break into spindrift. The foam is blown in well marked streaks along the direction of the wind.
9	Strong gale 41 - 47	High waves. Dense streaks of foam along the direction of the wind. Sea begins to roll. Spray may affect visibility.
10	Storm 48 - 55	Very high waves with long overhanging crests. The resulting foam in great patches is blown in dense white streaks along the direction of the wind. On the whole the surface of the sea takes a white appearance. The rolling of the sea becomes heavy and shocklike. Visibility affected.
11	Violent Storm 56 - 63	Exceptionally high waves. (Small and medium sized ships might be for a time lost to view behind the waves). The sea is completely covered with long white patches of foam lying along the direction of the wind. Everywhere the edges of the wave crests are blown into froth. Visibility affected.
12	Hurricane 64 - 71	The air is filled with foam and spray. Sea completely white with driving spray; visibility very seriously affected.

## In FOG these are the signals you may hear:

Under way and making way

Under way, but stopped

Sailing vessel

Vessel not under command

Vessel constrained by her draught

A vessel fishing

A vessel towing

A vessel under tow sounds a signal of one prolonged followed by three short blasts immediately following the towing vessel's signal

A vessel at anchor.  
Vessel over 325 ft (100 metres) also sounds gong aft following bell

A vessel aground.  
( III : Distinct strokes of bell)  
( WWW : Rapid ringing)

# Port Marine Safety Code

The Port Marine Safety Code (“the Code”) sets out a national standard for every aspect of port marine safety. Its aim is to enhance safety for everyone who uses or works in the UK port marine environment. It is endorsed by the UK Government, the devolved administrations and representatives from across the maritime sector and, while the Code is not mandatory, these bodies have a strong expectation that all harbour authorities will comply. The Code is intended to be flexible enough that any size or type of harbour or marine facility will be able to apply its principles in a way that is appropriate and proportionate to local requirements.

As required by the Port Marine Safety Code (PMSC), Cornwall Council publishes its policies, plans and periodic reports, setting out how they comply with those standards found below:-

- Cornwall Council as the SHA and CHA is committed to providing and operating their ports safely and efficiently for the benefit of all users and staff.
- Conduct regular reviews of all its activities and safety provisions to ensure that they remain the most appropriate and continue to be carried out to the highest standards.
- Ensure that the best standards of good governance and management current at any time are applied to their ports.
- Ensure authorised officers are aware of their environmental commitments and strive to ensure that their ports are managed in accordance with best practice.
- Continue to ensure that standards within their ports meet the demands of Government Policy and Regulation.

## Incident Reporting

A ‘Hazman Incident Report’ should be completed for any occurrence involving marine matters. These reports feed the Maritime Safety Management System and ensure Harbour Masters are aware of any arising actions.

Report incident –

<https://uk.hazman.org/incidentjRn73JtxM7DhyIZw69MI3Gx0N0rXaAqUBbgRyxS2>

Reports should be made in the following circumstances;

- An incident or accident of any description that affects, or may affect, Maritime operational safety, security or efficiency,
- Whenever a near miss occurs,
- To report vessel defects of any description that are not pre reported by the ships agent/master prior to arrival/departure,
- Whenever there is a berth issue i.e. faults, fendering, mooring difficulties, General observations that affect operational safety or efficiency,
- If a procedural system failure occurs,
- Complaints may be detailed on this form, however they must be significant,
- Whenever a vessel causes, or is suspected of causing, any damage to Maritime property,
- When a vessel is damaged in any way,
- Whenever oil pollution is caused or observed,
- For any other reason where it is felt that the Maritime Management should be aware or may need to take action.

# BUDE HARBOUR

## USE OF JET SKI'S (PWC) AND POWER BOATS

### Operating rules you should know

PWC's. Jet Ski's etc. can be launched from Bude Harbour subject to:  
Paying launch fees and having insurance cover.

All vehicles and trailers must be parked within the carparks and not left at the lock gates. All PWC's must proceed at a speed no greater than 4 knots between the Sea Lock and Chapel Rock.

Please be aware of other harbour users including swimmers, anglers etc. and stay well away from the bathing areas and public beaches.

All PWC users are strongly advised to follow all the recommendations from the RYA. Riding a PWC between sunset and sunrise is prohibited.

Don't drink and drive a PWC.

Bude Harbour limits range from Falcon Bridge to 400yards out to sea in an arc from the low water line at Barrel Rock. Any activity within that area is the responsibility of the Harbour Master.

**Any misuse of a PWC should be reported to the Harbour Master.**

**P Vincent - BudeHarbour Master**

**Email: [paul.vincent@cornwall.gov.uk](mailto:paul.vincent@cornwall.gov.uk) Mob: 07816077755**

**Always wear your Kill Cord and ride responsibly**

# Bude Canal Code of Conduct - For Waterway Users

Permits are required on the canal, for boating contact, 01288 354240 or 0300 1234 100 07799 560152 for angling.

- Avoid crossing the bows of oncoming craft at close quarters.
- Beware of beginner canoeists.
- Launch and recover craft from designated areas only.
- Ensure your boat is free from weed and wash down equipment after use to prevent spread of invasive species.
- Give way to those engaged in organised competitions, please note angling competition every Sunday morning 9-1pm.
- Pass anglers in single file at a steady speed, passing along the centre of the canal channel.
- Angling from boats is not permitted.
- Carry all craft around the inland locks using designated portage points only.
- Ensure there is no damage to the canal or its banks and nuisance is not caused to residents, other canal users wildlife.
- Do not swim, due to underwater hazards.
- Ice is never safe, keep off.
- Do not approach Weir, keep to far side of bank
- Beware of waterborne diseases, wash hands before eating.
- Cornwall Council recommends you wear lifejackets or buoyancy aides while on the water.

## **NOTE:**

*Cornwall Council will not be held responsible for any loss or damage to any craft or contents, whether caused by negligence or otherwise, boaters bring their craft to Bude Canal do so at their own risk.*

**CORNWALL**  
**FIRE & RESCUE SERVICE**  
A service of Cornwall Council

## **Avoiding Fire Afloat**

What to do if fire breaks out...

Act quickly - have everybody ready to leave the craft and get them off the boat as soon as you can

Call the Fire and Rescue Service - we'll need your location, use landmarks if possible

Turn off gas cylinders valves and close any fuel system valves that are safe to reach

Warn the occupants of adjacent craft, the harbour navigation authority and marina staff as appropriate  
Remember the risk of accidents happening is greater when alcohol has been consumed

If in doubt get out, stay out, dial 999

For free fire safety advice call 0800 3581 999 or visit our website for more information:

**[www.cornwall.gov.uk/fire](http://www.cornwall.gov.uk/fire)**

### **Carbon Monoxide Detector – The Silent Killer**

If you have any fuel burning appliances aboard, an engine or generator, fit a suitable audible carbon monoxide alarm meeting BS EN 50291 -2 for an added re-assurance.
